The Language Exchange Programme allows students in pairs to communicate in two different languages they wish to share and learn each week. Students record short entries after each partner meeting noting the language skills practised and the topics discussed. Each pair of students meets three times throughout the term with a teacher who decides if the exchange is effective. Students who successfully complete the programme will receive one credit each.

Requirements for completion:

- One welcoming session on the second Friday of the term
- 18 weekly one-hour pair meetings
- Weekly progress reports for all pair meetings

- Based on the information entered by each student, potential pairs are identified.
- Proficiency (熟练) levels are confirmed through coursework or placement tests.
- Once a pair has been determined to be suitable, the students will be contacted individually with a special permission number to register for the programme.

Reminders:

Signing up for the programme does not automatically mean that you will be able to register and participate. Pairs are matched by languages of interest and proficiency levels. Since there are many factors involved in the pairing process, not all students who sign up will be matched with a partner and be able to register for the programme.

When I was a little girl, I liked drawing, freely and joyously making marks on the walls at home. In primary school, I learned to write using chalks. Writing seemed to be another form of drawing. I shaped individual letters into repeating lines, which were abstract forms, delightful but meaningless patterns.

In secondary school, art was my favourite subject. Since I loved it so much I thought I was good at it. For the art O-level exam I had to present an oil painting. I found it difficult, but still hoped to pass. I failed, with a low grade. I'd been over-confident. Now I'd been declared talentless.

But other channels of creativity stayed open: I went on writing poems and stories. Still, I went to exhibitions

often. I continued my habitual drawing, which I now characterised as childish doodling (乱画). In my 30s, I made painter friends and learned new ways of looking at art. However, I couldn't let myself have a go at actually doing it. Though these new friends were abstract painters using oil paints, or were printmakers or sculptors, I took oil painting as the taboo (禁忌) high form I wasn't allowed to practice.

One night, in my early 40s, I dreamed that a big woman in red approached me, handed me a bag of paints, and told me to start painting. The dream felt so authoritative that it shook me. It was a form of energy, giving me back something I'd lost. Accordingly, I started by experimenting with water colours. Finally, I bought some oil paints.

Although I have enjoyed breaking my decades-long taboo about working with oil paints, I have discovered I now prefer chalks and ink. I let my line drawings turn into cartoons I send to friends. It all feels free and easy. Un-anxious. This time around, I can accept my limitations but keep going.

Becoming a successful painter calls for being resolute. I realised I was always afraid of wanting too much. That dream reminded me that those fears and desires could encourage me to take risks and make experiments.

24. How did the author feel about the result of the art exam?

- A. Scared. B. Worried. C. Discouraged. D. Wronged.

25. In her 30s, the author _____.

- A. avoided oil painting practice B. sought for a painting career
C. fancied abstract painting D. exhibited child paintings

26. Which word would best describe the author's dream?

- A. Confusing. B. Empowering.
C. Disturbing. D. Entertaining.

27. What can we learn from this passage?

- A. Actions speak louder than words. B. Hard work is the mother of success.
C. Dreams are the reflections of realities. D. Creative activities involve being confident.

【答案】 24. C 25. A 26. B 27. D

【解析】

【导语】 本文是一篇记叙文。文章主要讲述了作者一直喜欢绘画，但中学时由于油画测试成绩较低，作者对绘画失去了信心。在 40 岁出头时，一个梦让作者重拾画油画的信心并接受了自身局限性的故事。

【24 题详解】

推理判断题。根据第二段 “I found it difficult, but still hoped to pass. I failed, with a low grade. I'd been over-confident. Now I'd been declared talentless.(我觉得很难，但仍希望能通过测试。我没有通过，而且成绩很低。我过于自信了。现在，我被宣布为毫无(油画)天赋的人了)” 并结合下文中作者多年不碰油画的经历可

推知，作者对美术考试的结果感到气馁。故选 C。

【25 题详解】

细节理解题。根据第三段 “In my 30s, I made painter friends and learned new ways of looking at art.(在我 30 多岁时，我结交了画家朋友们，学到了看待艺术的新方法)” 和 “Though these new friends were abstract painters using oil paints, or were printmakers or sculptors, I took oil painting as the taboo (禁忌) high form I wasn’t allowed to practice. (虽然这些新朋友是使用油画颜料的抽象画师，或者是版画家或雕塑家，但我把油画作为禁忌的高级形式，不允许我练习)” 可知，作者在 30 多岁时回避练习油画。故选 A。

【26 题详解】

推理判断题。根据第四段 “The dream felt so authoritative that it shook me. It was a form of energy, giving me back something I’d lost. (这个梦给我的感觉是如此的权威，它震撼了我。它是能量的一种形式，让我找回我失去了的东西)” 可知，作者的梦赋予作者练习油画的力量。故选 B。

【27 题详解】

推理判断题。根据第六段 “Becoming a successful painter calls for being resolute. I realised I was always afraid of wanting too much. (成为一名成功的画家需要有决心。我意识到我总是害怕想要得太多)” 及文章内容可知，本文主要讲述了作者一直喜欢绘画，但中学时由于油画测试成绩较低，作者对绘画失去了信心。在 40 岁出头时，一个梦让作者重拾画油画的信心并接受了自身局限性的故事。由此可推知，我们能从文章中学到创作活动需要自信，故选 D。

C

The notion that we live in someone else’s video game is irresistible to many. Searching the term “simulation hypothesis” (模拟假说) returns numerous results that debate whether the universe is a computer simulation — a concept that some scientists actually take seriously. Unfortunately, this is not a scientific question. We will probably never know whether it’s true. We can, instead, use this idea to advance scientific knowledge.

The 18th-century philosopher Kant argued that the universe ultimately consists of things-in-themselves that are unknowable. While he held the notion that objective reality exists, he said our mind plays a necessary role in structuring and shaping our perceptions. Modern sciences have revealed that our perceptual experience of the world is the result of many stages of processing by sensory systems and cognitive (认知的) functions in the brain. No one knows exactly what happens within this black box. If empirical (实证的) experience fails to reveal reality, reasoning won’t reveal reality either since it relies on concepts and words that are contingent on our social, cultural and psychological histories. Again, a black box.

So, if we accept that the universe is unknowable, we also accept we will never know if we live in a computer simulation. And then, we can shift our inquiry from “Is the universe a computer simulation?” to “Can we model the

universe as a computer simulation?” Modelling reality is what we do. To facilitate our comprehension of the world, we build models based on conceptual metaphors (隐喻) that are familiar to us. In Newton’s era, we imagined the universe as a clock. In Einstein’s, we uncovered the standard model of particle (粒子) physics.

Now that we are in the information age, we have new concepts such as the computer, information processing, virtual reality, and simulation. Unsurprisingly, these new concepts inspire us to build new models of the universe. Models are not the reality, however. There is no point in arguing if the universe is a clock, a set of particles or an output of computation. All these models are tools to deal with the unknown and to make discoveries. And the more tools we have, the more effective and insightful we can become.

It can be imagined that comparable to the process of building previous scientific models, developing the “computer simulation” metaphor-based model will also be a hugely rewarding exercise.

28. What does the author intend to do by challenging a hypothesis?

- | | |
|------------------------|----------------------------|
| A. Make an assumption. | B. Illustrate an argument. |
| C. Give a suggestion. | D. Justify a comparison. |

29. What does the phrase “contingent on” underlined in Paragraph 2 probably mean?

- | | | | |
|-----------------|-------------------|-----------------|-------------------|
| A. Accepted by. | B. Determined by. | C. Awakened by. | D. Discovered by. |
|-----------------|-------------------|-----------------|-------------------|

30. As for Kant’s argument, the author is _____.

- | | | | |
|-----------------|-------------|----------------|-----------------|
| A. appreciative | B. doubtful | C. unconcerned | D. disapproving |
|-----------------|-------------|----------------|-----------------|

31. It is implied in this passage that we should _____.

- A. compare the current models with the previous ones
- B. continue exploring the classical models in history
- C. stop arguing whether the universe is a simulation
- D. turn simulations of the universe into realities up.

【答案】 28. C 29. B 30. A 31. C

【解析】

【导语】 本文是一篇议论文。文章主要讨论了哲学家对于宇宙的认知和信息时代下的作者对于宇宙争论的看法。

【28 题详解】

推理判断题。根据第一段 “Searching the term “simulation hypothesis” (模拟假说) returns numerous results that debate whether the universe is a computer simulation —— a concept that some scientists actually take seriously.

Unfortunately, this is not a scientific question. We will probably never know whether it’s true. We can, instead, use

this idea to advance scientific knowledge.(搜索“模拟假说”这一术语会得到许多关于宇宙是否是计算机模拟的争论结果——一些科学家实际上认真对待这个概念。不幸的是，这不是一个科学问题。我们可能永远都不知道这是不是真的。相反，我们可以利用这个想法来推进科学知识)”可知，作者对于模拟假说提出质疑，是为了提出自己的建议，建议使用这一想法来推进科学知识。故选 C 项。

【29 题详解】

词句猜测题。根据第二段 “If empirical (实证的) experience fails to reveal reality, reasoning won't reveal reality either since it relies on concepts and words that are contingent on our social, cultural and psychological histories. Again, a black box.(如果经验不能揭示现实，推理也不会揭示现实，因为它依赖于 contingent on 我们的社会、文化和心理历史的概念和词语)”可知，句中 that 引导限制性定语从句，指代先行词 concepts and words，且结合常识，概念和词语取决于我们的社会、文化和心理历史，推测划线短语表示“取决于”，与 determined by 意义相近。故选 B 项。

【30 题详解】

推理判断题。根据第二段 “The 18th-century philosopher Kant argued that the universe ultimately consists of things-in-themselves that are unknowable. While he held the notion that objective reality exists, he said our mind plays a necessary role in structuring and shaping our perceptions. (18 世纪的哲学家康德认为，宇宙最终由不可知的事物本身组成。虽然他认为客观现实是存在的，但他说，我们的大脑在构建和塑造我们的感知方面发挥着必要的作用)”以及第三段 “So, if we accept that the universe is unknowable, we also accept we will never know if we live in a computer simulation.(因此，如果我们接受宇宙是不可知的，我们也接受我们永远不会知道我们是否生活在计算机模拟中)”可知，作者引用康德的观点，并在客观陈述后利用该观点来构建自己的论述，由此可知，作者对康德的论点持欣赏的态度。故选 A 项。

【31 题详解】

推理判断题。根据第四段 “There is no point in arguing if the universe is a clock, a set of particles or an output of computation. All these models are tools to deal with the unknown and to make discoveries. And the more tools we have, the more effective and insightful we can become. (争论宇宙是否是一个时钟、一组粒子还是计算输出的产物是没有意义的。所有这些模型都是处理未知事物和发现事物的工具。我们拥有的工具越多，我们就能变得越有效、越有洞察力)”以及第五段 “It can be imagined that comparable to the process of building previous scientific models, developing the “computer simulation” metaphor-based model will also be a hugely rewarding exercise.(可以想象，与之前构建科学模型的过程相比，开发基于“计算机模拟”隐喻的模型也将是一项非常有益的工作)”可知，作者认为争论宇宙是否是虚拟的，这是没有意义的，我们应该停止争论宇宙是否为模拟，而应该着手于将其作为一个模型来探索和理解，这样会更有助于科学的进步。故选 C 项。

D

Franz Boas's description of Inuit (因纽特人) life in the 19th century illustrates the probable moral code of early humans. Here, norms (规范) were unwritten and rarely expressed clearly, but were well understood and taken to heart. Dishonest and violent behaviours were disapproved of; leadership, marriage and interactions with other groups were loosely governed by traditions. Conflict was often resolved in musical battles. Because arguing angrily leads to chaos, it was strongly discouraged. With life in the unforgiving Northern Canada being so demanding, the Inuit's practical approach to morality made good sense.

The similarity of moral virtues across cultures is striking, even though the relative ranking of the virtues may vary with a social group's history and environment. Typically, cruelty and cheating are discouraged, while cooperation, humbleness and courage are praised. These universal norms far pre-date the concept of any moralising religion or written law. Instead, they are rooted in the similarity of basic human needs and our shared mechanisms for learning and problem solving. Our social instincts (本能) include the intense desire to belong. The approval of others is rewarding, while their disapproval is strongly disliked. These social emotions prepare our brains to shape our behaviour according to the norms and values of our family and our community. More generally, social instincts motivate us to learn how to behave in a socially complex world.

The mechanism involves a repurposed reward system originally used to develop habits important for self-care. Our brains use the system to acquire behavioural patterns regarding safe routes home, efficient food gathering and dangers to avoid. Good habits save time, energy and sometimes your life. Good social habits do something similar in a social context. We learn to tell the truth, even when lying is self-serving; we help a grandparent even when it is inconvenient. We acquire what we call a sense of right and wrong.

Social benefits are accompanied by social demands: we must get along, but not put up with too much. Hence self-discipline is advantageous. In humans, a greatly enlarged brain boosts self-control, just as it boosts problem-solving skills in the social as well as the physical world. These abilities are strengthened by our capacity for language, which allows social practices to develop in extremely unobvious ways.

32. What can be inferred about the forming of the Inuit's moral code?

- | | |
|--------------------------------------|-------------------------------------|
| A. Living conditions were the drive. | B. Unwritten rules were the target. |
| C. Social tradition was the basis. | D. Honesty was the key. |

33. What can we learn from this passage?

- | | |
|--|--|
| A. Inconveniences are the cause of telling lies. | B. Basic human needs lead to universal norms. |
| C. Language capacity is limited by self-control. | D. Written laws have great influence on virtues. |

34. Which would be the best title for this passage?

- | | |
|-------------------------------------|----------------------------------|
| A. Virtues: Bridges Across Cultures | B. The Values of Self-discipline |

【导语】本文是一篇说明文。主要围绕人类道德规范的起源进行讨论，介绍了早期人类道德准则的形成过程及其如何根植于人类基本需求及共同的社会学习和问题解决机制中。

【32 题详解】

推理判断题。根据第一段 “Here, norms (规范) were unwritten and rarely expressed clearly, but were well understood and taken to heart. Dishonest and violent behaviours were disapproved of; leadership, marriage and interactions with other groups were loosely governed by traditions. Conflict was often resolved in musical battles. Because arguing angrily leads to chaos, it was strongly discouraged. With life in the unforgiving Northern Canada being so demanding, the Inuit’s practical approach to morality made good sense. (在这里，规范是不成文的，很少明确表达，但被很好地理解和铭记。不赞成不诚实和暴力行为；领导、婚姻以及与其他群体的互动都受到传统的松散控制。冲突往往通过音乐斗争来解决。因为愤怒的争论会导致混乱，所以强烈反对。在无情的加拿大北部，生活的要求如此之高，因纽特人对待道德的务实态度很有道理)” 可知，因纽特人的生活中，规范是不成文的，因纽特人的道德准则的形成是以社会传统为基础的。故选 C 项。

【33 题详解】

细节理解题。根据第二段 “These universal norms far pre-date the concept of any moralising religion or written law. Instead, they are rooted in the similarity of basic human needs and our shared mechanisms for learning and problem solving.(这些普遍规范远远早于任何道德化宗教或成文法律的概念。相反，它们植根于人类基本需求的相似性以及我们学习和解决问题的共同机制)” 可知，普遍的道德规范植根于人类基本需求的相似性以及我们学习和解决问题的共同机制，即人类的基本需求导致普遍的道德规范形成。故选 B 项。

【34 题详解】

主旨大意题。根据第一段 “Franz Boas’s description of Inuit (因纽特人) life in the 19th century illustrates the probable moral code of early humans.(弗朗兹·博厄斯对 19 世纪因纽特人生活的描述说明了早期人类可能的道德准则)” 以及文章内容可知，本文围绕人类道德规范的起源进行讨论，主要介绍了早期人类道德准则的形成过程及其如何根植于人类基本需求及共同的社会学习和问题解决机制中，所以 “道德的起源” 适合作为文章标题。故选 D 项。

第二节(共 5 小题;每小题 2 分，共 10 分)

根据短文内容，从短文后的七个选项中选出能填入空白处的最佳选项。选项中有两项为多余选项。

If you want to develop maximum credibility (可信性), is it better to be a hedgehog (刺猬) or a fox? According to Isaiah Berlin, the hedgehog knows one thing very well, and the fox knows a lot of things.

Is there a clear advantage of one style over the other? Hedgehog thinkers tend to answer yes. 35 And they are usually very credible in doing so. According to Jim Hart, the “hedgehog concept” is one of the factors that lead companies to greatness. They focus on one thing and do it really well. They figure out what they are good at.

36 The hedgehog concept makes perfect sense for companies.

37 Philip Tate has studied the track records of those folks on the Sunday talk shows who make predictions about what will happen. He has found that hedgehogs are not only wrong more often than foxes, but that they are less likely to recognise or admit that they are wrong when events do not match their predictions.

The advantage that foxes have is that they are more likely to seek out new information from a broader range of sources, and are comfortable with uncertainty and new information. 38 They try to include it in their viewpoint rather than to exclude it from their thinking. They also have a clearer estimation of what they know and don't know.

So, which is better? The question can be answered in a foxy hedgehog style. 39 The choice between being a hedgehog or a fox is a false trade-off. The most effective way to go through life is to try to be that rare mixture known as foxy hedgehog.

- A. In other words, there are clear advantages for each.
- B. They are more likely to remember people's mistakes.
- C. Hence, they have the advantage of clarity and confidence.
- D. But there can be a downside to concentration on one big thing.
- E. However, hedgehogs remain open to others' reactions and inputs.
- F. When something is contradictory to their view, they don't treat it as exceptional.
- G. They come down squarely on one side or the other and fully support their position.

【答案】 35. G 36. C 37. D 38. F 39. A

【解析】

【导语】本文是一篇说明文。主要介绍了拥有“刺猬”型思维方式和“狐狸”型思维方式的两类人对于个人和企业建立信誉度的优劣势。

第三部分 书面表达(共两节，32 分)

第一节 (共 4 小题;第 40、41 题各 2 分，第 42 题 3 分，第 43 题 5 分，共 12 分)

阅读下面短文，根据题目要求用英文回答问题。

Growing up, I idealised independence. I always wanted my own efforts to be enough. When I decided to pursue a postgraduate degree, I wanted to develop a novel research programme and quickly establish myself as an

independent scientist. But I was unrealistically optimistic about what I could achieve.

As I began designing experiments, my committee members warned me about the challenges I would face. But my need for independence drove me to push forward with my research plan. As a result, the first four years of my postgraduate career were defined by a series of failures.

During my second year, I failed my comprehensive exam because my proposal was unclear. During my third year, I discovered that after treating thousands of seeds, I obtained just one plant I could use for experiments. By my fourth year, my desperation to succeed overshadowed my desire for independence.

My adviser and I devised (想出) a somewhat unusual solution: I would spend three months in a collaborating (合作的) lab to obtain specialised training. I worked extensively with other students, constantly asked questions, and helped with ongoing projects to learn everything I could. Finally, I conducted an elegant experiment that would not have been possible without the help of the members in the lab.

My adviser saw this experience as a groundbreaking success, emphasising the collaborating skills I acquired. A few months later, when I repeated the experiment in my home lab, I produced more publishable data. By learning when to ask for help, I eventually found myself on the way to becoming an independent scientist.

40. In the beginning, what drove the author to push forward with the research plan?

41. What was the solution by the adviser and the author after those repeated failures?

42. Please decide which part is false in the following statement, then underline it and explain why.

> *The adviser considered the author's experience in the lab a groundbreaking success because publishable data had been produced.*

43. From this story, what can you learn about "independence"? (In about 40 words)

【答案】40. The need to be recognized as an independent scientist.

41. The author would spend three months in a collaborating lab to obtain specialised training.

42. *The adviser considered the author's experience in the lab a groundbreaking success because publishable data*

had been produced. It is because the author had acquired the collaborating skills by working with others there so that the adviser considered the author's experience in the lab a groundbreaking success.

43. In the story, success in becoming an independent scientist was ultimately achieved through collaboration, adaptive learning, and resilience in the face of setbacks. From the story, we learn that while independence is initially idealised and pursued passionately, true independence often involves recognizing the value of collaboration and learning than to seek help. (答案言之有理即可)

【解析】

【导语】本文是一篇记叙文。讲述了作者在追求科学研究的独立过程中遇到的挑战、失败、学习和成长的故事。

【40 题详解】

考查细节理解。根据第二段 “As I began designing experiments, my committee members warned me about the challenges I would face. But my need for independence drove me to push forward with my research plan. (当我开始设计实验时，我的委员会成员警告我，我将面临的挑战。但是我对独立的需求驱使我推进我的研究计划)” 可知，一开始，是作者对独立的需求驱使作者推进这个研究计划。故答案为：The need to be recognized as an independent scientist.

【41 题详解】

考查细节理解。根据倒数第二段 “My adviser and I devised (想出) a somewhat unusual solution: I would spend three months in a collaborating (合作的) lab to obtain specialised training. (我的导师和我想出了一个有点不同寻常的解决方案：我将在一个合作实验室里待上三个月，接受专门培训)” 可知，在反复的失败之后，导师和作者的解决方案是，作者将花三个月的时间在合作实验室接受专门培训。故答案为：The author would spend three months in a collaborating lab to obtain specialised training.

【42 题详解】

考查细节理解。根据最后一段 “My adviser saw this experience as a groundbreaking success, emphasising the collaborating skills I acquired. A few months later, when I repeated the experiment in my home lab, I produced more publishable data.(我的导师认为这段经历是一次开创性的成功，强调了我获得的合作技能。几个月后，当我在家里的实验室里重复这个实验时，我得到了更多可发表的数据)” 可知，导师认为作者在实验室的经历是一次开创性的成功，这是因为作者通过与他人合作获得了合作技能，而不是因为产生了可发表的数据。故答案：The adviser considered the author's experience in the lab a groundbreaking success **because publishable data had been produced.**

It is because the author had acquired the collaborating skills by working with others there so that the adviser considered the author's experience in the lab a groundbreaking success.

【43 题详解】

开放性问题。答案言之有理即可。通读全文可知，作者成为一名独立科学家的成功最终是通过合作、适应性学习和面对挫折的韧性来实现的。从这个故事中，我们了解到，虽然独立最初是理想化的，并被热情地追求，但真正的独立往往包括认识到合作的价值，并学会何时寻求帮助。故答案为：In the story, success in becoming an independent scientist was ultimately achieved through collaboration, adaptive learning, and resilience in the face of setbacks. From the story, we learn that while independence is initially idealised and pursued passionately, true independence often involves recognizing the value of collaboration and learning when to seek help.
